What is claimed is:

- An improved system for authentication of mail pieces bearing bar-coded indicia, the system comprising first and second bar-code readers, said first and second bar-code readers differing in that said first bar-code reader has a lower rate of successful reading of bar-coded indicia than said second bar-code reader, said system defining a first paper path through said first bar-code reader and subsequently through a first collator, said system disposed to collate a mail piece bearing an indicium in a second paper path in the event of a successful reading of said bar-coded indicium by said first bar-code reader, said system disposed to collate mail pieces in a third paper path in the event of an unsuccessful reading of said bar-coded indicium by said first bar-code reader, said third paper path leading to said second bar-code reader, said system disposed to collate mail pieces in a fourth paper path in the event of a successful reading of said bar-coded indicium by said second bar-code reader, said system disposed to collate mail pieces in a fifth paper path in the event of an unsuccessful reading of said bar-coded indicium by said second bar-code reader.
- 2. The improved system of claim 1 further comprising a third bar-code reader, said second and third bar-code readers differing in that said second bar-code reader has a lower rate of successful reading of bar-coded indicia than said third bar-code reader, said system further defining said fifth paper path through a second collator, said system disposed to collate mail pieces in a sixth paper path in the event of a successful reading of said bar-coded indicium by said second bar-code reader, said system disposed to collate mail pieces in a seventh paper path in the event of an unsuccessful reading of said bar-coded indicium by said second bar-code reader.
- 3. The improved system of claim 1 wherein the first bar-code reader is less expensive than the second bar-code reader.
- 4. The improved system of claim 1 wherein the first bar-code reader is faster than the second bar-code reader.
- 5. The improved system of claim 1 wherein the first bar-code reader has lower scanning resolution than the second bar-code reader.
- 6/A method for authenticating mail pieces bearing bar-coded indicia, the method comprising the steps of passing a mail piece bearing an indicium through a first bar-code reader, subsequently automatically collating said mail piece to a second paper path to a second bar-code reader in the event of an unsuccessful reading of said indicium by said first bar-code reader, said first and second bar-code readers differing in that said first bar-code reader has a lower rate of successful reading of bar-coded indicia than said second bar-code reader.
- 7. The method of claim 6 further comprising subsequently automatically collating said mail piece to a third paper path in the event of successful reading of said indicium by said second barcode reader.
- 8. The method of claim 6 further comprising subsequently automatically collating said mail piece to a fourth paper path to a third bar-code reader in the event of an unsuccessful reading of

said bar-coded indicium by said second bar-code reader, said second and third bar-code readers differing in that said second bar-code reader has a lower rate of successful reading of bar-coded indicia than said third bar-code reader.

- 9. The method of claim 8 further comprising subsequently automatically collating said mail piece to a fifth paper path in the event of successful reading of said indicium by said third barcode reader.
- 10. The method of claim 8 further comprising subsequently automatically collating said mail piece to a sixth paper path in the event of unsuccessful reading of said indicium by said third barcode reader.
- 11. The method of claim 7 further comprising the step of delivering the mail piece after said successful reading of said indicium by said second bar-code reader.
- 12. The method of claim 9 further comprising the step of delivering the mail piece after said successful reading of said indicium by said third bar-code reader.
- 13. The method of claim 6 further comprising subsequently automatically collating said mail piece to a fifth paper path in the event of an unsuccessful reading of said bar-coded indicium by said second bar-code reader.
- 14. The method of claim 13 further comprising the step of returning the mail piece to the sender after unsuccessful reading of said bar code by said second bar-code reader.
- 15. The method of claim 10 further comprising the step of returning the mail piece to the sender after unsuccessful reading of said bar code by said third bar-code reader.
- 16. The method of claim 6 further comprising subsequently performing a cryptographic authentication of said indicium and automatically collating said mail piece to a seventh paper path in the event of successful authentication of said bar code by said second bar-code reader.
- 17. The method of claim 6 further comprising subsequently performing a cryptographic authentication of said indicium and automatically collating said mail piece to an eighth paper path in the event of unsuccessful authentication of said bar code by said second bar-code reader.
- 18. The method of claim 9 further comprising subsequently performing a cryptographic authentication of said indicium and automatically collating said mail piece to a ninth paper path in the event of successful authentication of said bar code by said third bar-code reader.
- 19. The method of claim 9 further comprising subsequently performing a cryptographic authentication of said indicium and automatically collating said mail piece to a tenth paper path in the event of unsuccessful authentication of said bar code by said third bar-code reader.
- 20. An improved system for authentication of mail pieces bearing bar-coded indicia, the system

comprising first, second, and third bar-code readers, said first and third bar-code readers differing in that said first bar-code reader has a lower rate of successful reading of bar-coded indicia than said third bar-code reader, said second and third bar-code readers differing in that said second bar-code reader has a lower rate of successful reading of bar-coded indicia than said third bar-code reader,

said system defining a first paper path through said first bar-code reader and subsequently through a first collator, said system disposed to collate a mail piece bearing an indicium in a second paper path in the event of a successful reading of said bar-coded indicium by said first bar-code reader, said system disposed to collate mail pieces in a third paper path in the event of an unsuccessful reading of said bar-coded indicium by said first bar-code reader, said third paper path leading to said third bar-code reader,

said system defining a fourth paper path through said second bar-code reader and subsequently through a second collator, said system disposed to collate a mail piece bearing an indicium in a fifth paper path in the event of a successful reading of said bar-coded indicium by said second bar-code reader, said system disposed to collate mail pieces in a sixth paper path in the event of an unsuccessful reading of said bar-coded indicium by said second bar-code reader, said sixth paper path leading to said third bar-code reader

said system disposed to collate mail pieces in a seventh paper path in the event of a successful reading of said bar-coded indicium by said third bar-code reader, said system disposed to collate mail pieces in an eighth paper path in the event of an unsuccessful reading of said bar-coded indicium by said third bar-code reader.

- 21. The improved system of claim 20 wherein the first and second bar-code readers are each less expensive than the third bar-code reader.
- 22. The improved system of claim 20 wherein the first and second bar-code readers are each faster than the third bar-code reader.
- 23. The improved system of claim 20 wherein the first and second bar-code readers each have lower scanning resolution than the third bar-code reader.
